SITUATION SUMMARY

California Department of Public Health Zika Virus and Meningococcal Disease Update

The Medical and Health Coordination Center (MHCC) continues to be activated in response to the Zika Virus Disease 2016 and the Southern California Meningococcal Disease Outbreak 2016. The California Department of Public Health (CDPH) and Emergency Medical Services Authority (EMSA) are currently the only Emergency Function 08 (EF 08) partners at the state level reporting on these activations.

- The MHCC is coordinating with EF 08 partners, healthcare facilities and local health departments (LHDs) to ensure responses are timely and accurate.
- CDPH and EMSA Duty Officer Programs are monitoring the Zika virus and meningococcal disease outbreak after hours and remain in communication with the Regional Disaster Medical and Health Coordination (RDMHC) Programs and the Medical Health Operational Area Coordinator (MHOAC) Programs throughout California.

Zika Virus

- As of September 9, 2016, there have been 260 travel-associated Zika virus infections in California.
- Three new cases in pregnant women were reported during this operational period.
- CDPH centers and programs continue to monitor Zika virus disease and provide information to the MHCC related to their specific activities on a weekly basis.

Meningococcal Disease

- Since March 2016, there are 26 cases of meningococcal disease, no new cases have been reported during this period.
- Of the 26 cases, there were two fatalities, 24 are men, and of these, 20 identified as men who have sex with men (MSM).
- Of the 25 cases with known serogroup, all have been identified as serogroup C disease.
- Local health departments are developing a mechanism to share meningococcal disease surveillance data through the California Reportable Disease Information Exchange (CalREDIE).
- Please see attached for full report.

WEATHER SYNOPSIS BY REGION

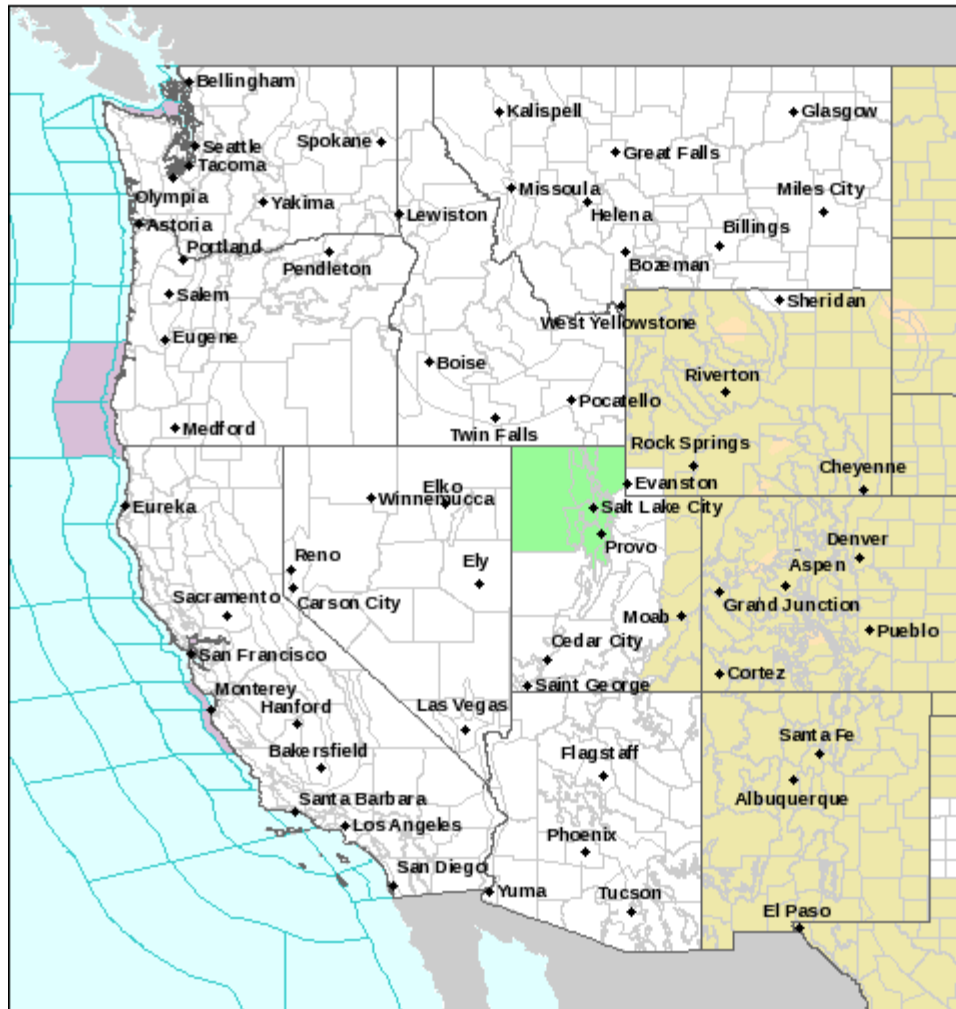

NORTHERN CALIFORNIA

Low pressure in Nevada will move off to the northeast today. A dry northwest flow aloft will be over the region as a Pacific high pressure ridge slowly approaches. A warming trend will bring temperatures closer to normal today, a bit above normal on Thursday and about 7-10 degrees above normal Friday and Saturday. The high pressure will produce gusty north-northeast/offshore downslope surface winds Thursday through early Sunday with very low relative humidity (RH) and poor overnight RH recovery from the western Sierra slopes to the coast. Peak gusts will be 20-30 mph in the northern Sacramento Valley and surrounding foothills Friday morning. The ridge will move to the south Sunday as a Pacific frontal system approaches the North Coast. Southwest to west winds will increase over the higher terrain, especially in the north. Temperatures will drop by about 5 degrees on Sunday and clouds will increase in northern areas. The front is expected to move into far northwest California with light rain Sunday night. Monday will be cooler and windy with scattered clouds throughout much of the region as the system moves through. There is a slight chance of light rain showers in Siskiyou and Modoc counties Monday as the front moves through. Computer models are currently hinting at a more substantial dry offshore wind event once the frontal system moves east of the area Tuesday/Wednesday.

SOUTHERN CALIFORNIA

The low pressure area which brought breezy and cool weather to the area has departed, which will allow high pressure over the Eastern Pacific to slowly edge toward the state. This will result in warmer and drier conditions, especially during the coming weekend. Cold air aloft has resulted in less marine layer coverage this morning and skies are mostly clear this morning. But lingering mid-level moisture will allow for extensive cloudiness to form near the higher terrain this afternoon. Temperatures, while 5-10 degrees warmer than yesterday, will still be a bit below average with highs in the 60s along the coast, 80s in the valley to 100 in the low desert. Winds will be much weaker with only the central coast seeing northwest winds of 15-25 mph this afternoon. Thursday and Friday, expect temperatures to climb to near normal readings with lower 90s common in the valleys. Surface high pressure building over the Great Basin may allow very light offshore flow to develop over the weekend. Wind speeds are expected to remain light, but the offshore winds may allow temperatures to become much warmer over much of Southern California. Highs may reach 100 in the warmest inland valleys and lower foothills of Southern California with minimum relative humidity (RH) dropping toward the 10-15% range. The warmest days will likely be Sunday and Monday before a weak trough brings cooling for the middle of next week. No precipitation is expected through the period.
